BACKGROUND INFORMATION

The SBA Shipyard Superfund Site (Site) is situated on approximately 98 acres of land located in a rural-industrial area, at 9040 Castex Landing Road, Jennings, Jefferson Davis Parish, Louisiana. The facility is located in south Jennings, LA and bordered to the north by residents, south and west by wetlands, and to the east by the Mermentau River. Access to the property is restricted with fencing and locked gates.

SBA Shipyards, Inc., (SBA) was incorporated in the state of Louisiana on June 2, 1965, for the purpose of construction, repair, retrofitting, cleaning of barges and other marine vessels. SBA operated a barge cleaning facility at the Site from 1965 to 1993. The facility is now inactive and abandoned.

Barges serviced at the Site typically held diesel, coal tar, crude oil, gasoline and asphalt. Wastes from the barge cleaning operations were managed in a waste management area that included four impoundments, a land treatment unit (LTU) and storage tanks. The wastes consisted of petroleum hydrocarbons which are the primary contaminants. The hydrocarbons were separated from the water into surface impoundments that were known as the Oil Pit, Water Pit 1, Water Pit 2 and Water Pit 3. Water was recycled to barge cleaning and some of the water was converted to steam for the cleaning operations.

Numerous attempts were made to bio-remediate and close the impoundments which began in 1989. In 1991 the bioremediation was determined to be unsuccessful. Land treatment of wastes continued through 1993.

On December 9, 2002, SSIC Remediation, L.L.C., (SSIC) entered into an Order and Agreement for Interim Measures/Removal Action (IM/RA) of Hazardous/Principal Threat Wastes at SBA Shipyards, Inc., pursuant to Resource Conservation Recovery Act (RCRA) Section 3008(h) with the U.S Environmental Protection Agency (EPA). Approximately 33.8 million pounds of oils, waxes and sludges, pumpable oily material and oily tank heels, 70 tons of contaminated debris and 88 tons of recyclable scrap steel were removed from the Site.

As part of the IM/RA, the Oil Pit and wastes from the storage tanks were stabilized and solidified for off-site disposal. Approximately 750,000 gallons of uncontaminated pond water were pumped from the former Water Pit to the drainage ditch that drains to the Mermentau River. The emptied Water Pit was then used to receive treated storm water from the partially buried barge. Pumpable oil materials were removed and buried which was then used to store contaminated storm water prior to treatment and discharge to the emptied Water Pit.

In September 2012, the Louisiana Department of Environmental Quality (DEQ) referred the Site to EPA for potential removal/remedial action. In May 2013, EPA conducted a Preliminary Assessment of the site and the final report which is dated June 3, 2013, confirmed the contamination of the site referenced above. On October 23 and 25, 2013, the United States Coast Guard responded to a release from an on-site buried barges.
